

DESIGNER APPLIANCES INC
Is committed in its support of the Section 508 goals and objectives.

Section 1194.21 Software Applications and Operating Systems - Detail
Voluntary Product Accessibility Template

<i>Criteria</i>	Supporting Features	Remarks and explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	N/A	
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Supports	Nib Software works at the windows graphical interface and provides a functionality of mouse button clicking without the need to employ finger activity. It does not access or interrogate other application contained within any window.
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Supports	The system is designed to provide a current focus at the on screen mouse cursor as a bitmap and color indicator of its functionality and operational state. Further more it is designed that each focus has a different bitmap shape and color so

		as to provide positive feedback of status within each application.
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Supports	Each of the visual program features is available as a written function with the options menu of the program
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	Supports	Images are consistent throughout
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	N/A	
(g) Applications shall not override user selected contrast and color selections and other individual display attributes.	Supports	Does not impinge upon user display attributes
(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	N/A	
(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Supports	Bitmap image functions are used in addition to any color coding variables
(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	N/A	
(k) Software shall not use flashing or	Supports	All within the

blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.		stated specification
(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	N/A	

(b) If a product utilizes touchscreens or touch-operated controls, an input method shall be provided that complies with §1194.23 (k) (1) through (4).	N/a	Full compliance of all aspects
(c) When biometric forms of user identification or control are used, an alternative form of identification or activation, which does not require the user to possess particular biological characteristics, shall also be provided.	N/a	
(d) Where provided, at least one of each type of expansion slots, ports and connectors shall comply with publicly available industry standards	N/a
